Financial Market Integration and Growth: Structural Change and Economic Dynamics in the European Union:

Financial capital, whether mediated through the financial market or Foreign Direct Investment has been a key factor in European economic growth. This book examines the interaction between European and global financial integration and analyses the dynamics of the monetary sector and the real economy in Europe. The key analytical focus is on the theoretical and empirical dynamics of financial markets in Europe, however, it also provides regional case studies of key institutional developments and lessons from foreign direct investment. There is a broad range of findings for Central, Eastern and Western Europe as well as EU Partner Countries. Crucially the analysis includes new approaches and options for solving the transatlantic banking crisis and suggests policy innovations for a world with unstable financial markets.
