Chris Nelder : Investing in Renewable Energy: Making Money on Green Chip Stocks (Angel Series) before purchasing it in order to gage whether or not it would be worth my time, and all praised Investing in Renewable Energy: Making Money on Green Chip Stocks (Angel Series):

2 of 2 people found the following review helpful. A complete study of all energy sourcesBy Felix CardonaA marvelous insight to the life cycle of every energy source. The fact that we are runing out of conservative fuels and time is running out before the coming catastrophe hits is well displayed wih corroborable references. There is no other

way to address the energy needs for the present generation and the following. I am very glad for purchasing a copy of this book for my loved ones.0 of 0 people found the following review helpful. Alternative EnergyBy Thomas SegarStudying this book made me more aware of the pitfalls on alternative energy development. I avoided some losing investments with this book.15 of 16 people found the following review helpful. Excellent bookBy Duane HixonThis book offers more than just opinions about renewable energy. It contains a lot of research on what has happened already, and some insight as to what may lie ahead. Not only does the book explain the major sources of renewable energy, it also details who the players are (both the companies and the countries) that are involved in pushing these ideas forward. The books aim of course is to show an individual how and where to invest to capitalize in the next age of energy, and I believe it delivers.

Investing in Renewable Energy puts the depletion of finite resources such as oil, natural gas, and coal in perspective, and discusses how renewable energy solutionsndash;from solar and wind to geothermal and biofuelsndash;will usher in a new generation of wealth for investors and a new way of life for everyone. With this book, you'll discover various renewable energy technologies that are at the forefront of transitioning our energy economy, and learn how to profit from next-generation renewable energy projects and companies that are poised to take over where fossil fuels will leave off.
