If you are looking for anything regarding how to invest based on human reaction or behavior, I would look elsewhere. Very thin and lacking depth. It reads more like a glossary to a Psych. 101 class. In a nutshell, we all have bias's and preconceived notions that keep us from being rational. Was looking for something that would show how to exploit this. From the Inside FlapAs we move forward into the 21st century, fraught with global economic uncertainties and disruptions, it is more important than ever to understand the fundamental realities of behavioral finance and the inherent human biases that drive so many of our investment decisions. In Investing Psychology: The Effects of Behavioral Finance on Investment Choice and Bias, renowned behavioral investment expert and blogger Tim Richards provides a plain-language guide for understanding the perils of the financial world that have evolved around us and teaches us how to defend ourselves against our most dangerous financial enemy ndash; our brain. Starting with an overview of how the brain perceives realities of the financial world at large and how human nature impacts even our most basic financial decisions, the author walks you through many of the preconceived notions that haunt individual investors and professional financial advisors alike. As humans, we tend to have an overly optimistic belief in our ability to assess risk and opportunity and to make the right decisions when it comes to our financial futures. And, unbeknownst to most of us, we are often being influenced by situational factors in our lives, as well as the pervasive group think of major financial media outlets and corporate marketing campaigns. All of it conspires to push us toward decisions that can have disastrous financial consequences. The key to overcoming the most common investment pitfalls, according to Tim Richards, is to learn to identify and overcome the fact that our tendency is often to make poor investment decisions because of our innate behavioral bias. When we understand how and why our brains consistently fool us, we gain the power to avoid bias in our decisions and maximize our investment returns.From the Back CoverPraise for Investing Psychology "All investors are biased. The vast majority of investors are hopelessly biased. The rest could benefit from Tim Richards' well-researched book. Therein lies the opportunity for those investors willing to commit to their own 'personal investing mission statement.'" mdash;Tadas Viskanta, Founder and Editor of the Abnormal Returns blog and author of Abnormal Returns: Winning Strategies from the Frontlines of the Investment Blogosphere Remove behavioral bias from your investment decisions For many financial professionals and individual investors, behavioral bias is the largest single factor behind poor investment decisions.
