**Borko Handjiski : Investment Matters (World Bank Working Papers)** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Investment Matters (World Bank Working Papers):

The purpose of this book is to provide policy insights to decision-makers, academics and researchers on investment flows and patterns in Southeast Europe. The report explores some of the determinants of private investment, such as: the financing sources for investment, the contribution of FDI and the role of public investment. It finds that investment rates in Southeast Europe are substantially lower than among the EU-8 and the fast growing East Asian economies,

which could explain partly the slower economic growth in Southeast Europe.
