F. Uuml;nal : Land Ownership Inequality and Rural Factor Markets in Turkey: A Study for Critically Evaluating Market Friendly Reforms (The Economics of the Middle East) before purchasing it in order to gage whether or not it would be worth my time, and all praised Land Ownership Inequality and Rural Factor Markets in

Turkey: A Study for Critically Evaluating Market Friendly Reforms (The Economics of the Middle East):

Uuml;nal uses Turkey as a case study to investigate the effectiveness and efficiency of land and labor markets in spreading economic opportunities within agriculture and its ability to reduce rural poverty.nbsp;

"Fatma Guuml;l Uuml;nal exposes the historic and geographic basis of Turkey's rural poverty and land inequality, which have recently increased, despite general economic success. Her new fieldwork confirms that - contrary to prevailing prejudice - smaller, more equal farms, reliant on family rather than hired labour, are more efficient than larger, machine-intensive farms in most of Turkey, mainly because labor-management is less costly. Yet, as this excellent book shows, exclusive reliance on markets cannot reduce Turkey's land inequality, so land reform is needed for efficient farming - as well as to reduce rural unemployment and poverty, and hence ethnic, regional, and class tensions." - Michael Lipton, member of the Council of the Overseas Development Institute, London, and recipient of Leontief Prize for Advancing the Frontiers of Economic ThoughtAbout the AuthorFATMA GUuml;L Uuml;NAL Economics Specialist for UNDP/Regional Bueau for Asia and the Pacifica, Regional Strategy and Policy Unit.She has taught economics at Bard College at Simon's Rock, USA, Bucknell University, and at the University of Massachusetts Amherst, where she is a staff economist at the Center for Popular Economics.
