From University of Chicago Press : The Structure and Evolution of Recent U.S. Trade Policy (National Bureau of Economic Research Conference Report) before purchasing it in order to gage whether or not it would be worth my time, and all praised The Structure and Evolution of Recent U.S. Trade Policy (National Bureau of Economic Research Conference Report):

The trade policies addressed in this book have far-reaching effects on the world's increasingly interdependent economies, but until now little research has been devoted to them. This volume represents the first systematic effort to analyze specific U.S. trade policies, particularly nontariff measures. It provides a better understanding of how trade policies operate, how effective they are, and what their costs and benefits are to trading nations. The contributors chart the history of U.S. trade policy since World War II, analyze industry-specific trade barriers, and discuss the effects of tariff preferences and export-promoting policies such as export credits and domestic international sales corporations (DISCs). The final section of essays examines the worldwide impact of import policies, pointing out subtleties in industry-specific policies and providing insight into the levels of protection in developing countries. The contributors blend state-of-the-art economics with language that is accessible to the business community, economists, and policymakers. Commentaries accompany each paper.

From the Back Cover
The trade policies in this book have far reaching effects on the world's increasingly interdependent economies, but until now little research has devoted to them. The contributors have made the first systematic effort to analyze specific U.S. trade policies, particularly nontariff measures.
About the Author
Robert E. Baldwin is Hilldale Professor of Economics at the University of Wisconsin, Madison. Anne O. Krueger is vice president, economics and research, at the World Bank.
