It is based on the classic "techno-fundamental" trading concept so well illustrated by Nicholas Darvas. Certainly anyone interested in making 10% a month would be interested! The gist of it is to favor stocks with both high momentum (30% gain over the last quarter, breaking new 52 week highs) and high value (P/E less than 10 and high cash flow). I certainly would like to see the author's actual trading statements to substantiate his claims. It would also help to understand better tactical execution of trades. Anyone claiming a 100% annual return over several years should be proud to open his Kimono and show us how it was done. Of course, I respect his privacy . . . but still I'd love to see those trade details! The Excel spread sheet program is a nice addition. Just one interesting observation: The column header titled "Inv Rank" uses a rank function that does not match the formula on page 62. Both table 6.1 on page 61 and the example spread sheet on the included CD itself do not rank, but use the formula: $\text{Inv Rank} = (1 * 2 + 100) / (3\text{-Mo \% Gain})$ since the rank has a span of just 1. The book is well worth owning for strategy. I think that specific tactics still need to be worked out by the practitioner. The book reinforces the fact that there is no substitute for experience in trade execution. I'd love to sit down and have lunch with the author and hear more about the gory details and his tactics. It sounds like he's had some fun, has lived a full life, and shares many of my own beliefs!

But in buying ebook do not expect to have access to the CD information via Wiley, essentially they told me tough luck. So if not important to you, buy the ebook. If not do not buy

Good methodology with rigorous analysis methods By David Henard Good methodology with rigorous analysis methods , but I question the level of performance over the long term. Moving in and out of the market is difficult and is often prone to failure.
